Задание:

Установить в виртуальную машину или VDS Docker, настроить набор контейнеров через docker compose по инструкции по ссылке: https://www.digitalocean.com/community/tutorials/how-to-install-wordpress-with-docker-compose-ru. Часть с настройкой certbot и HTTPS опустить, если у вас нет настоящего домена и белого IP.

* Запустить два контейнера, связанные одной сетью (используя документацию). Первый контейнер БД (например, образ mariadb:10.8), второй контейнер — phpmyadmin. Получить доступ к БД в первом контейнере через второй контейнер (веб-интерфейс phpmyadmin).

Результат:

Текст команд, которые применялись при выполнении задания. При наличии: часть конфигурационных файлов, которые решают задачу. Скриншоты результата запуска контейнеров (веб-интерфейс). Присылаем в формате текстового документа: задание и команды для решения (без вывода). Формат — PDF (один файл на все задания).

<u>Решение</u>

```
1)mkdir wordpress

cd wordpress

mkdir nginx-conf

nano nginx-conf/nginx.conf

server {
    listen 80;
    listen [::]:80;
    server_name hp www.ph;
    index index.php index.html index.htm;
```

root /var/www/html;

root /var/www/html;

allow all;

}

location ~ /.well-known/acme-challenge {

```
location / {
        try_files $uri $uri//index.php$is_args$args;
    }
    location ~ \.php$ {
        try_files $uri =404;
        fastcgi_split_path_info ^(.+\.php)(/.+)$;
        fastcgi_pass wordpress:9000;
        fastcgi_index index.php;
        include fastcgi_params;
        fastcgi_param SCRIPT_FILENAME $document_root$fastcgi_script_name;
        fastcgi_param PATH_INFO $fastcgi_path_info;
    }
    location ~ /\.ht {
        deny all;
    }
    location = /favicon.ico {
        log_not_found off; access_log off;
    location = /robots.txt {
        log_not_found off; access_log off; allow all;
    location ~* \.(css|gif|ico|jpeg|jpg|js|png)$ {
        expires max;
        log_not_found off;
    }
